Read

WAS is a clear favorite (70% to win). The catch: 1 projected bench spot(s) lean on a positional average (little game data yet) — treat those minutes as low-confidence.

- WAS is a clear favorite here (70% to win); we project WAS 87, TOR 72.
- Projected as an average-tempo game (total near 169).
- Availability: TOR without N. Sabally, B. Sykes, M. Conde (3 OUT) [+1 GTD] — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- Schedule: TOR on 1 day(s) rest (short-rest / back-to-back spot).
- How sure: 4 games in 5 the WAS margin lands between -10 and +22 (+ = WAS ahead) — single games swing a lot, and even so WAS loses outright about 30% of the time.
- 1 deep-bench player(s) projected from a positional average (little game data yet) — grouped in the box and treated as low-confidence.

A deeper look

What tonight means

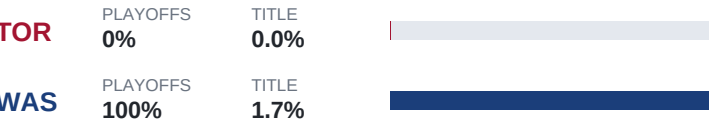

A win tonight puts **WAS's** playoff chances at **100%** — a loss drops them to **100%**.

Across both teams that makes this the **6th-biggest playoff-swing game** of this week's 15 remaining games.

Source: the rest of the season replayed 10,000 times, split by tonight's result (may differ from the headline odds by a fraction of a point — same simulation, different run counts).

Who moved the win probability on 06-12 — TOR 85–WAS 86.

TOR · J. Allemand -2.4 (22 min, 22 stints) · K. Nurse -3.3 (3 min, 4 stints) · I. Harrison -3.3 (25 min, 25 stints) · T. Key -9.5 (12 min, 15 stints) · T. Fágbénlé -9.7 (7 min, 9 stints) · M. Juskaite -42.5 (20 min, 20 stints) · **total -165.8**

Win probability is in points, so +10.0 means a player was on the floor for swings worth ten points of it. Each total is simply the numbers beside it added up. They run large because five players share the floor for every move and each is charged with all of it, so a side adds to five times its own swing in the game; that holds to the last decimal before rounding, and the two sides can differ by a tenth once each player is rounded. WAS won that night.

Appendix — how the numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → her own career, or her college record translated into WNBA rates, → positional average) × projected minutes, team points scaled to the simulation total. A row built mostly from a prior rather than from this season says so on the row itself. Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a "provisional" team has rotation players missing from tonight's model, so its box shows only the modeled minutes and is not inflated).
- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 426 games): Our spread calls miss by an average of 10.7 points · when we make a team a 60%+ favorite, they win 72% of the time · player minutes within +/-5.0, points within +/-4.1 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May '25 9.9 · Jun '25 10.7 · Jul '25 11.7 · Aug '25 10.0 · Sep '25 10.3 · May '26 11.1 · Jun '26 10.6 · Jul '26 12.2 points.
