Read

DAL is the narrow side of a near coin-flip (51% to win). The catch: NYL is down a rotation piece — L. Fiebich (impact +2.6) is OUT and already removed from the projection below.

- DAL is the narrow side of a near coin-flip here (51% to win); we project DAL 83, NYL 84.
- The model's on-court player ratings tilt to NYL — its top three rate +4.2 combined vs +2.0 on the other side (impact = points added vs an average player; see the box).
- Availability: DAL without A. Smith, P. Bueckers, C. Verona... (4 OUT); NYL without L. Fiebich, S. Sabally (2 OUT) [+1 GTD] — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- Schedule: DAL on 1 day(s) rest (short-rest / back-to-back spot).
- How sure: 4 games in 5 the DAL margin lands between -20 and +15 (+ = DAL ahead) — single games swing a lot, and even so DAL loses outright about 49% of the time.

A deeper look

What tonight means

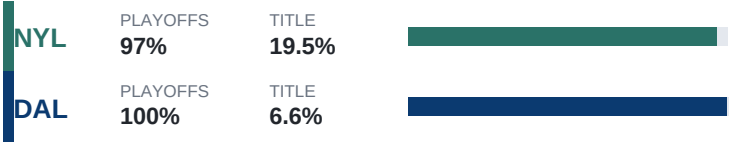

A win tonight puts **NYL's** playoff chances at **98%** — a loss drops them to **96%**.
Across both teams that makes this the **6th-biggest playoff-swing game** of this week's 10 remaining games.

Playoff swing: **0 points** · Typical seed: about 3rd with a win, 4th with a loss.

Source: the rest of the season replayed 10,000 times, split by tonight's result (may differ from the headline odds by a fraction of a point — same simulation, different run counts).

Appendix — how the numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → positional average) × projected minutes, team points scaled to the simulation total. Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a “provisional” team has rotation players missing from tonight's model, so its box shows only the modeled minutes and is not inflated).
- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 998 games): Our spread calls miss by an average of 10.8 points · when we make a team a 60%+ favorite, they win 68% of the time · player minutes within +/-6.0, points within +/-3.9 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May '25 9.9 · Jun '25 10.7 · Jul '25 11.7 · Aug '25 10.0 · Sep '25 10.3 · May '26 11.1 · Jun '26 10.6 · Jul '26 12.2 points.
all-games: spread +/-10.8 · minutes +/-6.0 · points +/-3.8
