Read

NYL is the narrow side of a near coin-flip (55% to win). The catch: **NYL** is down a rotation piece — **L. Fiebich** (impact +2.6) is OUT and already removed from the projection below.

- **NYL** is the narrow side of a near coin-flip here (55% to win); we project **NYL 86, CHI 81**.
- Projected as a higher-scoring game (total near **177**).
- Availability: **CHI** without R. Jackson, S. Diggins (2 OUT) [+1 GTD]; **NYL** without L. Fiebich, S. Sabally (2 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- How sure: 4 games in 5 the **NYL** margin lands between **-15** and **+17** (+ = **NYL** ahead) — single games swing a lot, and even so **NYL** loses outright about 45% of the time.

A deeper look
What tonight means

A win tonight puts **CHI's** playoff chances at **0%** — a loss drops them to **0%**.
Across both teams that makes this the **10th-biggest playoff-swing game** of this week's 19 remaining games.

Source: the rest of the season replayed 10,000 times, split by tonight's result (may differ from the headline odds by a fraction of a point — same simulation, different run counts).

The full predicted box score

Everything we predict about this game, in one place: both teams, every player in the rotation, and the range around every number.

These two teams

	NYL	CHI
ROTATION IMPACT (minutes-weighted)	+0.56 (10 of 10 rated)	+0.32 (12 of 12 rated)
PROJECTED SCORE	86	81
SEASON RECORD	22-14	13-22
RECENT FORM (last 10)	8-2 · +5.7 avg margin	4-6 · -2.5 avg margin

NYL leads the season series 2-0. 06-17 at CHI: NYL 96–CHI 95 · 07-22 at NYL: NYL 95–CHI 94. In 2025 they met 4 times, NYL winning 3.

Who moved the win probability on 06-17 — NYL 96–CHI 95.

This is an exact account of THAT GAME, not a rating of these players. It adds up every swing in win probability that happened while each player was on the floor. Because it describes a game that was already played rather than predicting one, it is exact — but it is also close to useless as a forecast: a player's number here tells us almost nothing about her next game, and it is not a ranking of who is good. Read it as a record of how this one night unfolded.

NYL · S. Ionescu +67.5 (25 min, 21 stints) · L. Fiebich +61.4 (22 min, 20 stints) · P. Astier +59.8 (21 min, 27 stints) · B. Stewart +35.2 (32 min, 33 stints) · M. Johannes +18.9 (15 min, 10 stints) · J. Jones +13.5 (26 min, 24 stints) · S. Sabally +10.5 (17 min, 18 stints) · H. Xu +3.3 (9 min, 10 stints) · R. Gardner -84.1 (13 min, 17 stints) · **total +186.0**

CHI · A. Stevens +79.5 (17 min, 16 stints) · K. Cardoso +7.2 (22 min, 18 stints) · R. Banham -12.1 (3 min, 3 stints) · G. Jaquez -13.7 (27 min, 24 stints) · S. Diggins -16.3 (28 min, 28 stints) · J. Sheldon -21.3 (10 min, 12 stints) · A. Coulibaly -25.5 (10 min, 10 stints) · S. Taylor -29.8 (25 min, 24 stints) · N. Cloud -35.7 (25 min, 29 stints) · E. Williams -118.3 (15 min, 16 stints) · **total -186.0**

Win probability is in points, so +10.0 means a player was on the floor for swings worth ten points of it. Each total is simply the numbers beside it added up. They run large because five players share the floor for every move and each is charged with all of it, so a side adds to five times its own swing in the game; that holds to the last decimal before rounding, and the two sides can differ by a tenth once each player is rounded. NYL won that night.

Sources: rotation impact = each player's on-court impact rating weighted by the minutes we project her to play tonight; records, form and past meetings = completed game results only, never tonight's. Who moved the win probability = every on-court stint of that one completed meeting added up per player — a description of that game, never a forecast and never a season number.

Every projected line

The grey figure under each number is the range we expect it to land in four times in five. It is deliberately wide — a range that looks confident and is wrong is worse than a wide one that is right. A number with no grey line under it is one we hold no fitted range for. IMPACT is points added versus an average player per 100 possessions; a dagger means the rating comes from her earlier record because she has no floor time this season yet, and a dash means we hold no rating for her at all.

Appendix — how the numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → her own career, or her college record translated into WNBA rates, → positional average) × projected minutes, team points scaled to the simulation total. A row built mostly from a prior rather than from this season says so on the row itself. Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a "provisional" team has rotation players missing from tonight's model, so its box shows only the modeled minutes and is not inflated).
- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 426 games): Our spread calls miss by an average of 10.7 points · when we make a team a 60%+ favorite, they win 72% of the time · player minutes within +/-5.1, points within +/-4.2 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May '25 9.9 · Jun '25 10.7 · Jul '25 11.7 · Aug '25 10.0 · Sep '25 10.3 · May '26 11.1 · Jun '26 10.6 · Jul '26 12.2 points.
