Read

ATL is a heavy favorite (85% to win).

- ATL is a heavy favorite here (85% to win); we project **ATL 92, POR 76**.
- The model's on-court player ratings tilt to **ATL** — its top three rate **+6.5** combined vs **+2.4** on the other side (impact = points added vs an average player; see the box).
- Availability: **ATL** without D. Bonner, B. Jones (2 OUT); **POR** without S. Ashlee Barker, S. Feagin, L. Geiselsoder... (4 OUT) [+1 GTD] — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- How sure: 4 games in 5 the **ATL** margin lands between **-4** and **+27** (+ = ATL ahead) — single games swing a lot, and even so ATL loses outright about 15% of the time; a big projected margin like this is the hardest kind to hit exactly.

This is an exact account of THAT GAME, not a rating of these players. It adds up every swing in win probability that happened while each player was on the floor. Because it describes a game that was already played rather than predicting one, it is exact — but it is also close to useless as a forecast: a player's number here tells us almost nothing about her next game, and it is not a ranking of who is good. Read it as a record of how this one night unfolded.

Win probability is in points, so +10.0 means a player was on the floor for swings worth ten points of it. Each total is simply the numbers beside it added up. They run large because five players share the floor for every move and each is charged with all of it, so a side adds to five times its own swing in the game; that holds to the last decimal before rounding, and the two sides can differ by a tenth once each player is rounded. ATL won that night.
