Read

ATL is a heavy favorite (81% to win).

- ATL is a heavy favorite here (81% to win); we project **ATL 86, SEA 79**.
- The model's on-court player ratings tilt to **ATL** — its top three rate **+6.5** combined vs **+2.8** on the other side (impact = points added vs an average player; see the box).
- Availability: **ATL** without T. Paopao (1 OUT); **SEA** without T. Mair (1 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- How sure: 4 games in 5 the **ATL** margin lands between **-7** and **+26** (+ = ATL ahead) — single games swing a lot, and even so ATL loses outright about 19% of the time; a big projected margin like this is the hardest kind to hit exactly.

The full predicted box score

Everything we predict about this game, in one place: both teams, every player in the rotation, and the range around every number.

These two teams

	SEA	ATL
ROTATION IMPACT (minutes-weighted)	-0.08 (12 of 12 rated)	+0.93 (12 of 12 rated)
PROJECTED SCORE	79	86
SEASON RECORD	6-24	17-11
RECENT FORM (last 10)	1-9 · -5.7 avg margin	5-5 · +0.4 avg margin

Split 1-1 this season. 06-27 at SEA: SEA 105–ATL 90 · 07-09 at ATL: SEA 78–ATL 89. In 2025 they met 4 times, SEA winning 2.

Sources: rotation impact = each player's on-court impact rating weighted by the minutes we project her to play tonight; records, form and past meetings = completed game results only, never tonight's.

Every projected line

The grey figure under each number is the range we expect it to land in four times in five. It is deliberately wide — a range that looks confident and is wrong is worse than a wide one that is right. A number with no grey line under it is one we hold no fitted range for. IMPACT is points added versus an average player per 100 possessions; a dagger means the rating comes from her earlier record because she has no floor time this season yet, and a dash means we hold no rating for her at all.

Appendix — how the numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → her own career, or her college record translated into WNBA rates, → positional average) × projected minutes,

team points scaled to the simulation total. A row built mostly from a prior rather than from this season says so on the row itself. Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a “provisional” team has rotation players missing from tonight’s model, so its box shows only the modeled minutes and is not inflated).

- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 998 games): Our spread calls miss by an average of 10.8 points · when we make a team a 60%+ favorite, they win 68% of the time · player minutes within +/-5.9, points within +/-4.0 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May '25 9.9 · Jun '25 10.7 · Jul '25 11.7 · Aug '25 10.0 · Sep '25 10.3 · May '26 11.1 · Jun '26 10.6 · Jul '26 12.2 points.
