

SPREAD	WIN PROB
DAL -0.5	DAL 38% / NYL 62%
PROJECTED SCORE	PROJECTED MARGIN
DAL 82.9 — NYL 83.9	NYL by 8.3

NYL win 62% · pick'em (0) · DAL win 38%

Shaded area each side of pick'em = each team's win chance; dark tick = our call. Source: the game's simulated margin distribution. Sources differ: calibrated median -8.3 vs raw simulation mean -1.0; shaded-area win 27% vs headline win prob 38% — the calibrated distribution is shown.

Total — our model: 174.9 · market close: n/a (market shown for context, never our number).

The spread is our regression's call (DAL -0.5); the projected box follows our game simulation (implies +1.0); the margin range covers both.

Source: The Hardwood margin & win-probability models; projected score and total from the 1M-run game simulation; range = calibrated margin interval.

Some inputs served from the most-recent build (minutes via props fallback; also winprob) — see companion file for detail.

Read

- Our model favors **DAL** by **0.5 pts**; win probability **38%**.
- Availability: **DAL** without H. Jones, C. Verona, A. Smith (3 OUT); **NYL** without M. Fauthoux, S. Sabally, L. Fiebich (3 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- Uncertainty: 90% margin interval [-31.7, +14.5] (home), width 46.2 pts — wide single-game spread.

Out / day-to-day — minutes redistributed

Team	Player	Status	Return
NYL	Marine Fauthoux	Out	Jul 16
NYL	Satou Sabally	Out	Jul 18
NYL	Leonie Fiebich	Out	Jul 18
DAL	Haley Jones	Out	Jul 16
DAL	Costanza Verona	Out	Jul 16
DAL	Alanna Smith	Out	Jul 16

Projected box

Big # = jersey · bold above the line = projected starters (top-5 minutes) · IMPACT = points added vs an average player per 100 possessions (— = not yet rated) · ± = typical PTS range (80%).

Source: per-slate minutes + player-rate projections, availability-adjusted (minutes → 200, points scaled to the simulation score).

A deeper look

What tonight means

A win tonight puts **NYL's** playoff chances at **97%** — a loss drops them to **93%**.

Across both teams that makes this the **7th-biggest playoff-swing game** of this week's 15 remaining games.

NYL

if they win

97%

if they lose

93%

Playoff swing: 4 points

· Typical seed: about 5th with a win, 6th with a loss.

DAL

if they win

100%

if they lose

99%

Playoff swing: 1 points

· Typical seed: about 3rd with a win, 4th with a loss.

Source: the rest of the season replayed 10,000 times, split by tonight's result (may differ from the headline odds by a fraction of a point — same simulation, different run counts).

How sure are we? — final-margin distribution

Best estimate: **NYL** by **8.3**. The curve is the full range of simulated final margins; taller = more likely, flatter/fatter = less certain.

Shaded area each side of the pick'em line = that team's win chance; the dark tick is our call (median margin).

Typical final margins — 50%: [-19, +1] · 80%: [-27, +9] · 90%: [-32, +15] (home frame; a -ve number = the away team wins by that much).

Source: the game's simulated margin distribution — density reconstructed for display from the calibrated 50/80/90 margin intervals (7 quantile knots), tails tapering. Sources differ: calibrated median -8.3 vs raw simulation mean -1.0; shaded-area win 27% vs headline win prob 38% — the calibrated distribution is shown.

How these numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → positional average) × projected minutes, team points scaled to the simulation total. Minutes = per-slate

projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a “provisional” team has rotation players missing from tonight’s model, so its box shows only the modeled minutes and is not inflated).

- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 998 games): Our spread calls miss by an average of 10.8 points · when we make a team a 60%+ favorite, they win 68% of the time · player minutes within +/-5.9, points within +/-3.8 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May 9.9 · Jun 10.7 · Jul 11.7 · Aug 10.0 · Sep 10.3 · May 11.1 · Jun 10.6 · Jul 12.2 points.
all-games: spread +/-10.8 · minutes +/-5.9 · points +/-3.8
