

SPREAD	WIN PROB
WAS -2.1	WAS 49% / POR 51%
PROJECTED SCORE	PROJECTED MARGIN
WAS 77.7 — POR 77.9	POR by 1.6

POR win 51% · pick'em (0) · WAS win 49%

Shaded area each side of pick'em = each team's win chance; dark tick = our call. Source: the game's simulated margin distribution. Sources differ: calibrated median -1.6 vs raw simulation mean -0.3 — the calibrated distribution is shown.

Total — our model: 163.6 · market close: n/a (market shown for context, never our number).

The spread is our regression's call (WAS -2.1); the projected box follows our game simulation (implies +0.2); the margin range covers both.

Source: The Hardwood margin & win-probability models; projected score and total from the 1M-run game simulation; range = calibrated margin interval.

Some inputs served from the most-recent build (minutes via props fallback; also winprob) — see companion file for detail.

Read

- Our model favors **WAS** by **2.1 pts**; win probability **49%**.
- Availability: **POR** without S. Feagin, J. Harrison, M. Gustafson (3 OUT [+1 GTD] — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- Uncertainty: 90% margin interval [-25.0, +21.2] (home), width 46.2 pts — wide single-game spread.
- 1 deep-bench player(s) projected from a positional average (little game data yet) — grouped in the box and treated as low-confidence.

Out / day-to-day — minutes redistributed

Team	Player	Status	Return
POR	Sania Feagin	Out	
POR	Jordan Harrison	Out	Jul 16
POR	Megan Gustafson	Out	Jul 18
POR	Teja Oblak	Day-to-day	Jul 16

Projected box

Big # = jersey · bold above the line = projected starters (top-5 minutes) · IMPACT = points added vs an average player per 100 possessions (— = not yet rated) · ± = typical PTS range (80%).

Source: per-slate minutes + player-rate projections, availability-adjusted (minutes → 200, points scaled to the simulation score).

POR

Projection provisional — roster incomplete (players missing from tonight's model).

A deeper look

What tonight means

A win tonight puts **WAS**'s playoff chances at **31%** — a loss drops them to **19%**.
 Across both teams that makes this the **2nd-biggest playoff-swing game** of this week's 15 remaining games.

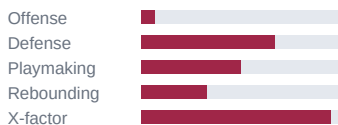

Source: live 1M-run season simulation (the board's odds core).

Starting-five skill profiles

6 B. Carleton

13 N. Puoch

No prior-season skill data yet (first WNBA season)

20 F. Buhner

No prior-season skill data yet (first WNBA season)

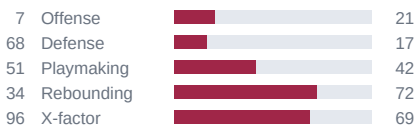

0 S. Austin

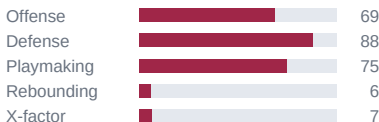

23 C. McMahon

No prior-season skill data yet (first WNBA season)

15 L. Geiselsoder

0 C. Leite

44 K. Iriaften

12 M. Onyenwere

8 G. Amoore

No prior-season skill data yet (first WNBA season)

Source: league-percentile bars from each player's most recent full-season profile (the 2025 season); first-year players have none yet. Estimated from public play-by-play.

How sure are we? — final-margin distribution

Best estimate: **POR** by **1.6**. The curve is the full range of simulated final margins; taller = more likely, flatter/fatter = less certain.

POR win 51% · pick'em (0) · **WAS win 49%**

Shaded area each side of the pick'em line = that team's win chance; the dark tick is our call (median margin).

Typical final margins — 50%: [-12, +7] · 80%: [-20, +15] · 90%: [-25, +21] (home frame; a -ve number = the away team wins by that much).

Source: the game's simulated margin distribution — density reconstructed for display from the calibrated 50/80/90 margin intervals (7 quantile knots), tails tapering. Sources differ: calibrated median -1.6 vs raw simulation mean -0.3 — the calibrated distribution is shown.

How these numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → positional average) × projected minutes, team points scaled to the simulation total. Minutes = per-slate

projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a “provisional” team has rotation players missing from tonight’s model, so its box shows only the modeled minutes and is not inflated).

- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 998 games): Our spread calls miss by an average of 10.8 points · when we make a team a 60%+ favorite, they win 68% of the time · player minutes within +/-5.9, points within +/-3.8 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May 9.9 · Jun 10.7 · Jul 11.7 · Aug 10.0 · Sep 10.3 · May 11.1 · Jun 10.6 · Jul 12.2 points.
all-games: spread +/-10.8 · minutes +/-5.9 · points +/-3.8
