

Morning edition — minutes and points below are our PROJECTED-rotation calls, made before final injury word. A corrected version lands about 15 minutes before tip, once availability is confirmed.

Heads up: 1 healthy player(s) who are expected to play are missing from tonight's player projections (Toronto Tempo — Temi Fágbenlé (about 18 minutes and 6 points a game)). Their minutes and scoring are NOT reflected in the box below, so the listed players' minutes are overstated to fill out the game. Treat that team's per-player lines as provisional — the corrected report before tip will add them back once the projection is rebuilt. The team total and the game pick are unaffected (those come from a separate whole-team model).

SPREAD	WIN PROB
MIN -8.2	TOR 24% / MIN 76%
PROJECTED SCORE	90% MARGIN RANGE
TOR 76.4 — MIN 83.2	[-28, +13]

The spread is our regression's call (MIN -8.2); the projected box follows our game simulation (implies -6.8); the margin range covers both.

Fair value

- Fair line by our model: MIN -8.2.
- Fair game total: 178.3 points · no market closing number exists yet this early in the day.
- Win chances: TOR 24% · MIN 76%.
- Market comparison lands in the pre-tip update, once closing numbers exist.

Read

- Our model favors MIN by 8.2 pts; win probability 76%.
- Availability: TOR without I. Harrison, B. Sykes (2 OUT); MIN without E. Cechova, L. King (2 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- How sure: 4 games in 5 the MIN margin lands between -8 and +26 (+ = MIN ahead) — single games swing a lot, and even so MIN loses outright about 24% of the time.

What tonight means

A win tonight puts TOR's playoff chances at 0% — a loss drops them to 0%.

Across both teams that makes this the 12th-biggest playoff-swing game of this week's 12 remaining games.

MIN	if they win		100%
	if they lose		100%
Playoff swing: 0 points · Typical seed: about 1st either way.			
TOR	if they win		0%
	if they lose		0%

Playoff swing: **0 points** · Typical seed: about 13th either way.

Everything we predict about this game, in one place: both teams, every player in the rotation, and the range around every number.

Every projected line

The grey figure under each number is the range we expect it to land in four times in five. It is deliberately wide — a range that looks confident and is wrong is worse than a wide one that is right. A number with no grey line under it is one we hold no fitted range for. IMPACT is points added versus an average player per 100 possessions; a dagger means the rating comes from her earlier record because she has no floor time this season yet, and a dash means we hold no rating for her at all.

This is the player we know least about: too little record to project from and no earlier record of her own to fall back on, so her line rests on the positional average. The range is wide on purpose.

Season so far: 2 games, 1.0 pts / 1.0 reb / 0.0 ast per game.

Sources: on-court impact rating and season floor-time share from the season-impact read; skill percentiles from each player's most recent completed season; foul-trouble risk from tonight's simulated foul read where one exists for this game.

How these numbers are made

- Player values = per-minute rates (last-10-games form, season fallback, positional average for players with little game data) × projected minutes; team scoring is scaled to the simulation total.
 - Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed, their minutes reallocated to the healthy rotation, no player over their cap (box sums to 200).
 - The rotation logic shown above reads our daily depth chart: each player's slot at her position and her trailing-minutes norm, adjusted for who is out tonight.
 - Confidence tags restate what each projection is built on — they add no new math.
 - Scores / totals = means of a 1M-run Monte-Carlo simulation; spread = regression + home recalibration.
 - Playoff leverage = the season replayed 10,000 times, split by tonight's result.
 - Some player-level estimates lean on the limited public play-by-play detail available for this league; richer tracking data would sharpen them.
- What happens next: availability is re-checked all day; the corrected pre-tip report (about 15 minutes before the game) confirms or adjusts every number here.
