

Rolling accuracy: insufficient history (grading begins 2026-07-08).

SPREAD	WIN PROB	PROJ SCORE	90% MARGIN
PHO -9.1	PHO 65% / CHI 35%	PHO 84.2 — CHI 79.0	[-15, +31]

Spread shown is the v12 regression (PHO -9.1); the projected box reflects the simulation's score means (implies -5.2); the margin interval spans both.

Total — our model: 172.6 · market close: 172.5 (18 books) _ (our regime-refreshed total model; market shown for context, not borrowed. The projected score split above is the sim decomposition; this line is the calibrated total.)_

Title odds: CHI 0.0% (+0.0pp) · PHO 1.7% (-0.7pp)

Style: Phoenix's ball movement vs Chicago's offensive-glass crashing — a style contrast, not a prediction.

Read

- Model team-strength gap favors **PHO** by **9.1 pts** (v12 OLS, home-recentered); win probability **65%**.
- Availability: **PHO** without J. Nogic, S. Whitcomb, N. Mack... (4 OUT); **CHI** without R. Jackson, D. Carrington, M. Westbeld... (5 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- Uncertainty: 90% margin interval [-15.5, +30.7] (home), width 46.2 pts — wide single-game spread.
- 6 deep-bench player(s) projected on the cold-start prior (thin basis) — grouped in the box and treated as low-confidence.

Availability (excluded from the box; minutes redistributed)

Team	Player	Status	Injury	Return
CHI	Ricke Jackson	out	Out	
CHI	DiJonai Carrington	out	Out	Jul 15
CHI	Maddy Westbeld	out	Out	Jul 10
CHI	Chloe Bibby	out	Out	Jul 10

5 PM report impact

- **5 PM report impact** — no change vs the 3 PM snapshot (stable slate).

How these numbers are made

- Player values = per-minute rates (rolling-10 recent form, season fallback, positional prior for cold-start) × projected minutes; team scoring is renormalized to the simulation total.
- Minutes = v6 per-slate projection + injury redistribution under per-player caps — OUT players removed, their minutes reallocated to the healthy rotation, no player over their cap (box sums to 200).
- Scores / totals = means of a 1M-run Monte-Carlo simulation.
- Spread = regression (v12 OLS) + home recalibration.
- Uncertainty = calibrated conformal interval (~89% observed coverage at the 90% target).

THE SEASON SO FAR (through 143 games):

Our spread calls miss by an average of 10.9 points · when we make a team a 60%+ favorite, they win 66% of the time · totals not yet tracked as-of · player minutes within +/-9.8, points within +/-6.0 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)

all-games: spread +/-10.9 · minutes +/-9.8 · points +/-6.0
