

Rolling accuracy: insufficient history (grading begins 2026-07-08).

SPREAD	WIN PROB	PROJ SCORE	90% MARGIN
NYL -13.2	NYL 73% / DAL 27%	NYL 86.0 — DAL 81.2	[-11, +35]

Spread shown is the v12 regression (NYL -13.2); the projected box reflects the simulation's score means (implies -4.8); the margin interval spans both.

Total — our model: 176.6 · market close: 175.5 (18 books) — (our regime-refreshed total model; market shown for context, not borrowed. The projected score split above is the sim decomposition; this line is the calibrated total.)

Title odds: DAL 6.3% (+0.3pp) · NYL 20.8% (-0.5pp)

Style: New York's rim pressure vs Dallas's ball movement — a style contrast, not a prediction.

Read

- Model team-strength gap favors **NYL** by **13.2 pts** (v12 OLS, home-recentered); win probability **73%**.
- Availability: **NYL** without L. Fiebich, S. Sabally, R. Allen (3 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- Uncertainty: 90% margin interval [-11.3, +34.9] (home), width 46.2 pts — wide single-game spread.
- 6 deep-bench player(s) projected on the cold-start prior (thin basis) — grouped in the box and treated as low-confidence.

Availability (excluded from the box; minutes redistributed)

Team	Player	Status	Injury	Return
NYL	Leonie Fiebich	out	Out	Jul 11
NYL	Satou Sabally	out	Out	Jul 11
NYL	Rebecca Allen	out	Out	Jul 11

5 PM report impact

- **5 PM report impact** — no change vs the 3 PM snapshot (stable slate).

How these numbers are made

- Player values = per-minute rates (rolling-10 recent form, season fallback, positional prior for cold-start) × projected minutes; team scoring is renormalized to the simulation total.
- Minutes = v6 per-slate projection + injury redistribution under per-player caps — OUT players removed, their minutes reallocated to the healthy rotation, no player over their cap (box sums to 200).
- Scores / totals = means of a 1M-run Monte-Carlo simulation.
- Spread = regression (v12 OLS) + home recalibration.
- Uncertainty = calibrated conformal interval (~89% observed coverage at the 90% target).

THE SEASON SO FAR (through 143 games):

Our spread calls miss by an average of 10.9 points · when we make a team a 60%+ favorite, they win 66% of the time · totals not yet tracked as-of · player minutes within +/-9.8, points within +/-6.0 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)

all-games: spread +/-10.9 · minutes +/-9.8 · points +/-6.0
