Projected score TOR 76 — ATL 85 · Total 169

Read

- **ATL** is a slight favorite here (60% to win); we project **ATL 85, TOR 76**.
- The model's on-court player ratings tilt to **ATL** — its top three rate **+6.5** combined vs **+1.9** on the other side (impact = points added vs an average player; see the box).
- Availability: **TOR** without B. Sykes, K. Rice (2 OUT) [+1 GTD]; **ATL** 2 GTD (T. Paopao, B. Jones) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- How sure: 4 games in 5 the **ATL** margin lands between **-10** and **+26** (+ = ATL ahead) — single games swing a lot, and even so ATL loses outright about 40% of the time.
- 1 deep-bench player(s) projected from a positional average (little game data yet) — grouped in the box and treated as low-confidence.

A deeper look

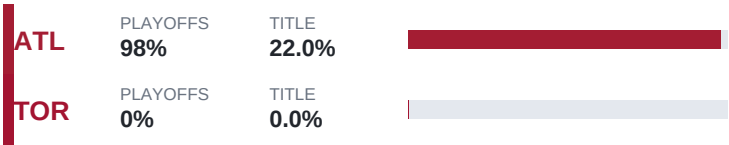

What tonight means

A win tonight puts **ATL**'s playoff chances at **98%** — a loss drops them to **96%**.
Across both teams that makes this the **10th-biggest playoff-swing game** of this week's 10 remaining games.

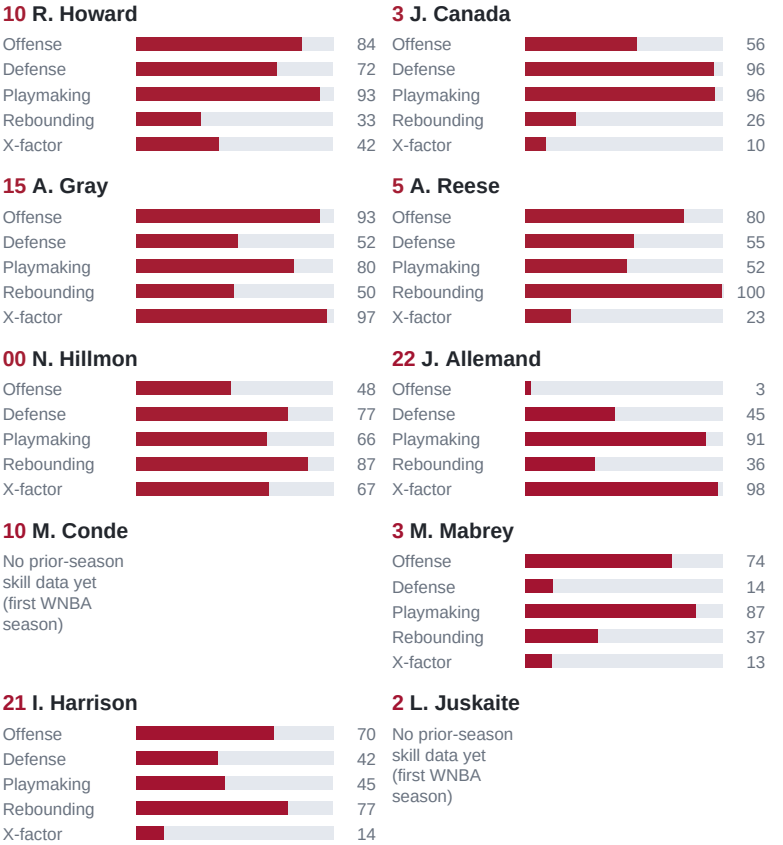

Source: the rest of the season replayed 10,000 times, split by tonight's result (may differ from the headline odds by a fraction of a point — same simulation, different run counts).

Starting-five skill profiles

Appendix — how the numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → positional average) × projected minutes, team points scaled to the simulation total. Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a "provisional" team has rotation players missing from tonight's model, so its box shows only the modeled minutes and is not inflated).
- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 998 games): Our spread calls miss by an average of 10.8 points · when we make a team a 60%+ favorite, they win 68% of the time · player minutes within +/-5.9, points within +/-3.8 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)
Recent monthly accuracy (average miss, lower is better): May '25 9.9 · Jun '25 10.7 · Jul '25 11.7 · Aug '25 10.0 · Sep '25 10.3 · May '26 11.1 · Jun '26 10.6 · Jul '26 12.2 points.
