Read

LVA is the narrow side of a near coin-flip (51% to win). The catch: TOR is down a rotation piece — K. Rice (impact +0.8) is OUT and already removed from the projection below.

- LVA is the narrow side of a near coin-flip here (51% to win); we project LVA 82, TOR 77.
- The model's on-court player ratings tilt to LVA — its top three rate +4.3 combined vs +1.9 on the other side (impact = points added vs an average player; see the box).
- Availability: TOR without N. Sabally, K. Rice, B. Sykes (3 OUT); LVA without K. Bell, J. Barker (2 OUT) — OUT players are excluded from the box; the minutes of any projected among them are redistributed into the rotation below.
- How sure: 4 games in 5 the LVA margin lands between -14 and +22 (+ = LVA ahead) — single games swing a lot, and even so LVA loses outright about 49% of the time.

Injuries & availability — out of the projected box

TEAM	PLAYER	STATUS / CAUSE	GAMES MISSED	EXP. RETURN

A deeper look

What tonight means

A win tonight puts **LVA's** playoff chances at **100%** — a loss drops them to **100%**.

Across both teams that makes this the **8th-biggest playoff-swing game** of this week's 10 remaining games.

Starting-five skill profiles

Source: league-percentile bars from each player's most recent full-season profile (the 2025 season); first-year players have none yet. Estimated from public play-by-play.

Scoring ranges — projected starters

Each bar spans a starter's likely points — light = wider range, dark navy = most likely, tick = our projection. Scale 0–35 pts.

Appendix — how the numbers are made

- Scores, totals & the margin distribution = a 1M-run Monte-Carlo simulation; spread = regression + home recalibration; the margin curve & ranges are calibrated intervals (~89% observed coverage at the 90% target); playoff leverage = the season replayed 10,000 times, split by tonight's result.
- Player values = per-minute rates (last-10-games form → season → positional average) × projected minutes, team points scaled to the simulation total. Minutes = per-slate projection + injury redistribution under per-player caps — OUT players removed and their minutes reallocated (box sums to 200; a "provisional" team has rotation players missing from tonight's model, so its box shows only the modeled minutes and is not inflated).

- Some player-level estimates lean on the limited public play-by-play for this league; richer tracking data would sharpen them.

THE SEASON SO FAR (through 998 games): Our spread calls miss by an average of 10.8 points · when we make a team a 60%+ favorite, they win 68% of the time · player minutes within +/-6.0, points within +/-3.9 (player lines: reconstructed day-before for all 143 games; live tracking began Jul 8.)

Recent monthly accuracy (average miss, lower is better): May '25 9.9 · Jun '25 10.7 · Jul '25 11.7 · Aug '25 10.0 · Sep '25 10.3 · May '26 11.1 · Jun '26 10.6 · Jul '26 12.2 points.
