

READ THIS FIRST

- THIS IS AN EXHIBITION. Every rating and every per-minute rate used here was fit on REGULAR-SEASON play and is being applied OUT OF REGIME to an All-Star game. Nothing below is a regular-season-grade projection.
- The team total this all hangs off rests on n=5 format-matched games. Player level is thinner still. The WIDTH IS THE FINDING -- a tight prop is a manufactured prop.
- Odds shown are FAIR (zero vig). A real book will price worse on both sides. An edge only exists if the book's price beats the fair price by more than its hold.
- Betting is a DOWNSTREAM READOUT of the impact/rating model and the team projection -- read those first, these second.
- Kelsey Plum is OUT. Kahleah Copper is her replacement and was NOT drafted (no pick slot).
- STL / BLK / TOV are NOT offered: the All-Star box-score record carries no steal, block or turnover columns, so there is no All-Star basis to calibrate them against. UNKNOWN, not guessed.
- 2018+ All-Star minutes are NULL in the source, so the minutes model is fitted on 1999-2017 and the starter/reserve gap is ASSERTED, not fitted.

FAIR LINES (FMV) - every player, every metric. FMV is where the clear rate crosses 50%: the number a zero-vig book would hang.

% cleared' is the share of simulations that finished ABOVE the line. The highlighted row inside each metric is the offered line closest to the 50% crossing. Prices: decimal first, American second. OUT: Kelsey Plum.
